Qt for HarmonyOS

Note: Qt for HarmonyOS is in technology preview and may change in future releases.

Qt for HarmonyOS enables you to develop Qt applications for HarmonyOS devices.

Qt for HarmonyOS provides the platform integration, build and packaging support, and the platform plugin that connect the cross-platform Qt libraries (such as Qt Core, Qt GUI, Qt Quick, and Qt Widgets) to HarmonyOS. A Qt application is packaged into a HarmonyOS Ability Package (HAP) and runs on the device through the HarmonyOS platform plugin.

Key features and capabilities

- **Cross-platform development.** Write your application code once, typically a Qt Quick application with a C++ back-end, and deploy it on HarmonyOS alongside the other platforms that Qt supports, with minimal or no adjustments.
- **Native performance.** The Qt runtime is compiled for HarmonyOS, so it runs as native code on the device.
- **Rich UI components.** Use Qt Quick and Qt Quick Controls for responsive interfaces, or Qt Widgets for traditional widget-based UIs.
- **C++ integration.** Reuse existing C++ libraries and high-performance native code.

Supported configurations

Building and developing with Qt for HarmonyOS is supported on Windows(x86_64)/Linux(x86_64)/macOS(x86_64)/macOS(Apple Silicon) development hosts.

The following configurations are supported in this Qt release:

Section	Description
Distribution	HarmonyOS 6.1.0 (API 23) and later
Architecture	arm64-v8a
Compiler	Clang 15.0.4 (SDK 6.1.0) **Note:** It's recommended that Qt apps use the same SDK version used for building the official Qt for HarmonyOS libraries to avoid missing symbol errors.
Target	Huawei HarmonyOS Computers/Tablets/Phones

Note: There is a plan to switch to later HarmonyOS releases in the future.
